

DCS Government Services LLC

CAPABILITIES STATEMENT

Secure systems Rapid delivery

DCS Government Services LLC delivers secure technology, private AI, connectivity, and mission-critical facilities support. We take requirements from architecture and procurement through integration, installation, deployment, and ongoing support.

Systems architecture and integration

Requirements analysis, architecture, systems design, and engineering for compute, storage, networking, virtualization, and operating systems. Enterprise application and infrastructure integration across AWS, Azure, private cloud, and hybrid environments.

Systems, platform, and database migrations; application development and automation; UNIX/Linux and Windows administration. Installation, configuration, testing, documentation, and operational handoff, with capacity, resilience, and lifecycle planning.

Private AI and accelerated computing

Architecture and platform selection across NVIDIA DGX B200, DGX B300, DGX Station, and H100/H200-based infrastructure. GPU, storage, networking, and workload sizing; procurement, integration, deployment, and monitoring.

On-premises LLM inference and private AI using agency-approved models and customer security requirements. Model evaluation and performance optimization; retrieval-augmented generation, enterprise search, and document ingestion that enforces existing access permissions. Integration with enterprise applications and content repositories.

Restricted-connectivity or disconnected-environment planning, with power, cooling, rack, and site-readiness coordination.

Custom networks and last mile

Custom network architecture, implementation, and integration for fiber and last-mile connectivity. Structured cabling, routing, switching, firewalls, and WAN connectivity, with carrier coordination, redundancy planning, and end-to-end testing.

Rapid procurement and deployment

Rapid sourcing and deployment with straightforward, transparent pricing and lean procurement markups.

- Responsive sourcing of hardware, software, licensing, and complete solutions.
- Requirements clarification, configuration, bills of materials, and compatibility validation.
- Lead-time coordination and practical alternatives.
- Staging, integration, deployment, and lifecycle support, with facility requirements coordinated.

Cleared expertise

TS/SCI, full-scope polygraph, and Yankee White resources across technical and mission support roles, with experience across multiple agencies.

PEOPLE AND OPERATIONS

Cleared talent Mission support

Highly skilled TS/SCI personnel, including full-scope polygraph and Yankee White (YW) resources, bring experience across multiple agencies. We match assignments to customer skill, clearance, and access requirements.

Cleared technical resources

- Network engineers, enterprise and solution architects, and systems engineers.
- UNIX/Linux and Windows specialists; secure AWS, Azure, and private cloud professionals.
- Project and program managers; technical, administrative, and specialized staff.

Facilities and engineering

Operations, maintenance, and engineering support for mission-critical facilities.

- Electrical, HVAC, plumbing, and building controls; preventive and corrective maintenance; equipment operations.
- Janitorial and cleaning services; groundskeeping, landscaping, snow removal, and exterior maintenance.
- Building repairs and painting; site readiness and installation coordination; power and cooling assessments and commissioning support, where applicable.

Security architecture and operations

System hardening, identity and access management, network segmentation, encryption, and audit logging. Vulnerability assessment and remediation, security monitoring, and configuration management. Engineering and documentation support for customer security and authorization requirements.

Program and project support

Program and project management, scheduling, subcontractor coordination, quality assurance, transitions, and operational handoff. Administrative and operational support with technical and specialized staffing.
